About me

Who I am and what I'm looking for

I'm a professional software developer with Python as my core expertise and primary battle-tested tool!
I specialize in architecting reliable backend systems and complex data processing solutions. I'm looking for new opportunities where I can apply my deep Python and DevOps knowledge, tackle new challenges, and deliver high-impact results.
My combination of expert-level Python, extensive Linux experience, deep networking knowledge, and top-tier troubleshooting skills allows me to handle projects of any scale.
I have a proven track record of diving into complex incidents to identify and resolve root causes, ensuring system stability and performance.
Whether starting from scratch or optimizing established legacy systems, I bring a strategic approach to every line of code.

Primary skills

What I'm really good in

python | linux | networking | concurrency

Experienced in

Technologies short list

python 3, asyncio, rust, golang, pytest, flask, postgresql, rabbitmq, django, django rest framework, jwt & oauth2, docker/docker-compose, kubernetes, aiohttp, celery, mysql, tornado, mongodb, redis, nginx, git, github ci, shell scripting, blockchain integration, generative ai & llms, and more!

Some of work history

Proven experience

Open-source Python framework and cloud platform for building and managing autonomous AI agents.

Worktime: december 2022 - present
Tech stack: python3, django, postgresql, hashicorp vault, kubernetes (k8s), aws, gcp (gke), github ci, terraform, helm, grafana, velero, ipfs, gnosis chain
Role: senior python engineer
Details: Core framework developer contributing to open-source autonomous AI agent architectures.

Developed the platform-dependent Python backend for the "Olas" desktop application (Electron-based), ensuring seamless cross-platform execution (macOS, Windows, Linux) and integrating secure digital signatures.
Developed an internal cloud platform for deploying autonomous agents in Kubernetes (K8s) using Django, PostgreSQL, HashiCorp Vault, and custom orchestration logic.
Served as a DevOps engineer managing the full lifecycle of cloud services, including a major infrastructure migration from AWS to GKE utilizing Terraform for Infrastructure as Code (IaC).
Packaged and deployed internal web applications to Kubernetes using Helm charts.
Configured comprehensive agent monitoring and observability with Grafana, designing custom dashboards for end-users.
Implemented robust Kubernetes backup and disaster recovery strategies using Velero.
Deployed a dedicated Gnosis Chain RPC node to support blockchain-integrated infrastructure.
Analyzed IPFS cluster data and integrated third-party AI services for automated content evaluation.
Developed a custom CLI tool to automate infrastructure and agent deployments via GitHub Actions.
Conducted technical interviews for Python, DevOps, and QA engineer roles, helping shape the engineering team.
Provided architectural guidance and expert troubleshooting across the company's Python ecosystem.

fetch.ai

Worktime: april 2020 - december 2022 A Python framework for autonomous economic agent (AEA) development.
Tech stack: python3.6-3.10, asyncio, golang
Role: senior python developer
Details: Optimized overall runtime performance and established comprehensive performance benchmarks.
Refactored the framework's runtime core for enhanced asyncio compatibility.
Resolved complex dependency management issues (migrating to pipenv and poetry).
Configured CI/CD pipelines, automated checks, and testing environments.
Provided technical support and documentation for third-party developers.
Implemented integration tests and significantly improved overall code coverage.
Resolved critical blocking issues in asynchronous code to ensure non-blocking execution.
Automated Docker image building and deployment processes.
Worked on the 'cosmpy' library to support Cosmos-based ledger interactions.
Contributed to a p2p communication network based on libp2p (Golang integration).
Fixed networking bottlenecks related to overflows and timeouts.

Revolut internal service (HR related)

Worktime: 4 months
Tech stack: python3.7, django2, django rest framework3, celery4, postgres10
Role: senior python developer
Details: Joined an established HR-tech project and introduced significant improvements to the backend codebase and infrastructure.
Reduced code redundancy through systematic refactoring and increased system stability with high test coverage.
Established a test server deployment pipeline for frontend verification.
Implemented a custom migration system to manage individual data migrations more efficiently.

upstack

streaming service

Worktime: 5 months
Tech stack: python3.7, flask, asyncio, rabbitmq, postgresql10, redis
Role: senior python developer
Details: Collaborated with a team of experts to migrate a monolithic backend to a modern microservices architecture.
Designed microservices intercommunication protocols using JSON REST APIs, RabbitMQ, and PostgreSQL.
Implemented an efficient pub/sub exchange system on RabbitMQ for real-time websocket notifications.
Developed and launched 4 core microservices and assisted with API gateway DevOps configurations.

Polyx

cryptocurrency exchange

Worktime: 1.5 years
Tech stack: python3.6, django2, celery4, postgresql10, rabbitmq, redis
Role: lead backend developer
Details: Founding developer; architected the entire platform, including database schema, integrations, and core logic.
Implemented the full backend solution: REST API, high-performance order book processing, and secure payment gateway integrations.
Successfully integrated 3 fiat payment gateways and over 8 cryptocurrencies.
Developed internal and external APIs for partners and automated trading bots.

PageFreezer

social media archiving platform

Worktime: 1.5 years
Tech stack: python2.7, tornado, cassandra, mongodb2, rabbitmq
Role: senior python backend developer
Details: Contributed to a large-scale social media data processing platform built on Tornado.
Participated in the transition to a microservices architecture using RabbitMQ and Cassandra as primary storage.
Worked extensively on social media API integrations and complex data normalization logic.
Developed a dedicated service for digital document signing and REST API endpoints.

ajillion

online ads exchange and bidding platform

Worktime: 6 months
Tech stack: python2.7, django1, mysql5, vertica, celery, rabbitmq, redis, lua
Role: senior python backend developer
Details: Enhanced backend functionality for the administrator console of a production ad-exchange platform.
Gained deep experience with Python's metaprogramming, including metaclasses and dynamic type construction.
Developed core logic for ad-exchange internals and bidding processing.

RebelMouse

social media aggregation startup

Worktime: 3 years

Tech stack: python2.7, django1, mysql4, celery, rabbitmq, redis
Role: senior python developer with js skills
Details: Rebelmouse.com was built on top of Django.
Joined during the early stages of development and helped scale the platform to production.
Developed a comprehensive statistics engine from scratch: data gathering, transformation, storage, and visualization.
Implemented social authentication and SSO support for mobile applications and REST backend services.

upwork™ best freelance platform

Worktime: 7 years
Tech stack: django1, flask, pyqt, mysql, mongodb and more
Role: freelancer for various projects
Details: Successfully completed 27 projects for 22 different clients over 7 years as a standalone and team developer.
Handled diverse technical challenges across various stacks, consistently delivering high-quality Python solutions.

Special interests

What I dig after hours

Asyncio, Rust
MongoDB (advanced storage), Qt (cross-platform GUI expertise),
libp2p (modern peer-to-peer networking)

I am currently developing a peer-to-peer RPC framework in Rust.
While Python is my primary production tool, I explore Rust and P2P technologies to build high-performance, decentralized systems that solve complex communication challenges.

Additionally, I am a power user of Generative AI tools to accelerate my development workflow. I have a deep interest in LLM architectures and have practical experience experimenting with local model deployments and hardware-level optimization.

Details

questions and answers

What about Python?
I have deep expertise in the Python ecosystem, including Django, DRF, Tornado, and Flask.
I am a strong advocate for quality code, utilizing pytest, mock, and factory_boy for comprehensive testing.
My special interests include asyncio, threading, and multiprocessing for high-concurrency systems.
I also have experience extending Python with C/C++ (ctypes, SWIG, Cython) and modern Rust-based extensions (PyO3).

Any experience with Go or Rust?
Python is my primary battle-tested language with extensive production history.
I have practical experience with Go (Golang) from my tenure at Fetch.AI.
Rust is my current area of intense R&D; I use it to build performance-critical extensions and my P2P RPC pet project.

Troubleshooting and debugging?
I consider deep troubleshooting one of my core strengths. I excel at pinpointing root causes in complex, distributed systems.
Whether it's an elusive asyncio race condition or a Kubernetes infrastructure mystery, I enjoy the

"detective work" required to provide long-term fixes rather than temporary patches.

Do you use AI in your work?
Yes, I integrate AI into my daily workflow for rapid prototyping, debugging, and brainstorming.
I also explore the engineering side of ML, having experimented with local LLM deployments to understand their resource constraints and operational requirements.

Workflows and Methodologies?
I am accustomed to Agile environments (Scrum/Kanban) and thrive in collaborative teams.
I value high-quality code reviews and technical excellence. While I prefer self-documenting code, I have experience writing custom load-testing scripts to ensure system reliability.

What about Linux and Open Source?
Linux is my daily driver and "second home" for over 12 years. I am highly proficient in server automation and configuration.
I am also a community contributor, having spoken at "Open Source Day" events about the benefits of the Linux ecosystem.

SQL experience?
Mainly PostgreSQL with Django ORM and SQLAlchemy. I am comfortable with complex joins, window functions, and query optimization.
I use EXPLAIN ANALYZE to identify performance bottlenecks and tune indexing/memory settings.

NOSQL skills?
I'm a big fan of MongoDB and have extensive experience with Redis for caching and messaging.

Languages I speak
Russian, English (IELTS overall score: 6)

Remote? Relocation?
Open to remote and relocation opportunities worldwide (visa sponsorship required).

Mentorship?
I have experience mentoring developers, including running intensive Python courses for C++ engineers.
Topics covered performance optimization, MPI, and extending Python with C-modules, culminating in successful practical projects.

Any management experience?
I've served as a Project Manager for a Digital Signage startup, managing a team of 3 developers and handling direct customer communication.
Though the project was paused due to external funding issues, we successfully delivered a validated prototype approved by investors.
